Summary

MSc Financial Technology student with 3 years of CloudOps experience, bringing strong analytical, problem-solving, and technical skills in Python, SQL, and financial modelling to identify patterns in complex systems and deliver practical, data-driven solutions.

Education

Nanyang Technological University, Singapore *Aug. 2026 – May 2027*

MSc Financial Technology – Intelligent Process Automation

Amrita Vishwa Vidyapeetham, Coimbatore *July 2019 – June 2023*

B.Tech Computer and Communication Engineering CGPA: 8.87/10.0

- Awarded the Silver Medal for academic excellence in undergraduate studies (Aug. 2023).

Experience

Bounteous *June 2023 – Dec. 2025*

Support Analyst – CloudOps Chennai, IND

- Analyzed infrastructure and application telemetry across 20+ client environments using Splunk, Sumo Logic, Site24x7, and CloudWatch, improving proactive risk detection and SLA adherence.
- Investigated 200+ infrastructure and 30+ security incidents by correlating logs and metrics, identifying root causes and restoring services.
- Built targeted Cloudflare WAF rules from credential-stuffing and probing traffic analysis across 20+ client environments.
- Optimized AWS ECS scaling policies using CloudWatch workload metrics, sustaining 99.99% uptime during peak traffic while reducing compute cost.
- Built monitoring dashboards in Site24x7 visualizing CPU, memory, API latency, and database metrics across 20+ client environments.
- Migrated a legacy EC2-based NGINX service to AWS ECS Fargate using Docker, Terraform, and CI/CD, with Python scripts automating configuration, redirect, and SSL validation.
- Created infrastructure runbooks adopted by the on-call engineering team, documenting AWS deployment requirements gathered with cross-functional stakeholders.

Bounteous *Jan. 2023 – May 2023*

Software Engineer Intern Chennai, IND

- Built full-stack web applications using React.js, Node.js, MongoDB, and AWS, delivering data-driven features for production use.
- Received an upgraded full-time offer in recognition of outstanding internship performance (May 2023).

Projects

Credit Card Fraud Detection using Classification Methods

- Built a fraud classifier in Python, analyzing 284,807 credit card transactions (0.173% fraud) and flagging 72.6% of fraud cases at 88.5% precision at the default decision threshold.
- Tuned the fraud-flagging decision threshold to raise the fraud catch rate to 77.9% while precision held at 87.1%, framing the trade-off as blocking a genuine customer versus missing a fraud.

A Unified Deep Learning Based Low-complex Android Ransomware Detection Engine

- Built a deep learning-based Android ransomware detection model in Python, applying behavioural analysis and feature selection across 10 ransomware families.
- Reduced the ransomware classifier's feature set by applying ANOVA-based feature selection to hybrid static and dynamic sandbox analysis data, isolating high-value behavioural attributes across 10 ransomware families.
- Built and optimized an MLP classifier in Python achieving 98.3% binary classification accuracy and 88.3% multiclass accuracy across 10 ransomware families.

Certifications

Bloomberg Market Concepts *Oct. 2026*

Bloomberg Finance Fundamentals *Sep. 2026*

Google Cybersecurity Professional Certificate *Sep. 2024*

Cloudflare Accredited Configuration Engineer (ACE) *June 2024*

Technical Skills and Interests

Technical: Python, SQL, AWS, Docker, Terraform, Git, Cloudflare

Soft: Problem Solving, Analytical Thinking, Cross-functional Collaboration, Technical Communication

Coursework: ML & AI, Deep Learning, DSA, DBMS, ML in Finance, Data Analysis with Python, Foundations of statistical modelling, Principles of Finance & Risk Management

Extra Curricular Activities

Bloomberg Global Trading Challenge 2026 *Oct. 2026*

Web Development freelance – Singapore *Sep. 2026*

TEDxNTU Volunteer – Logistics and Operations *Sep. 2026*
