Summary

MSc Financial Technology student with 3 years of CloudOps experience, bringing strong analytical, problem-solving, and technical skills in Python, SQL, and data analysis to identify patterns in complex systems and deliver practical, data-driven solutions.

Education

Nanyang Technological University, Singapore *Aug. 2026 – May 2027*

MSc Financial Technology – Intelligent Process Automation

Amrita Vishwa Vidyapeetham, Coimbatore *July 2019 – June 2023*

B.Tech Computer and Communication Engineering CGPA: 8.87/10.0

- Awarded the Silver Medal for academic excellence in undergraduate studies (Aug. 2023).

Experience

Bounteous *June 2023 – Dec. 2025*

Support Analyst – CloudOps Chennai, IND

- Analyzed infrastructure and application telemetry across 20+ client environments using Splunk, Sumo Logic, Site24x7, and CloudWatch, identifying abnormal patterns and operational risk signals to improve proactive detection and SLA adherence.
- Investigated 200+ infrastructure and 30+ security incidents by correlating logs, metrics, and event patterns, identifying root causes and implementing corrective actions to restore services and prevent recurrence.
- Analyzed traffic and behavioural patterns associated with credential-stuffing and probing activity, translating findings into targeted Cloudflare WAF rules that measurably reduced malicious traffic and false positives.
- Analyzed CloudWatch workload metrics and optimized AWS ECS scaling policies during peak traffic, achieving 99.99% uptime while reducing compute overhead and operational cost.
- Developed Python automation and unified monitoring dashboards to process operational data, automate validation workflows, and visualize CPU, memory, API latency, and database metrics for faster, data-driven diagnosis.
- Led migration of a legacy EC2-based NGINX service to AWS ECS Fargate, developing Python validation scripts to analyze configurations, verify redirects and SSL certificates, and automate deployment workflows using Docker, Terraform, and CI/CD.
- Partnered with development, API, and cross-functional teams to define AWS infrastructure requirements and deployment readiness, authoring runbooks that reduced onboarding time for on-call engineers.

Bounteous *Jan. 2023 – May 2023*

Software Engineer Intern Chennai, IND

- Built full-stack web applications using React.js, Node.js, MongoDB, and AWS, implementing data-driven features across backend systems and cloud-hosted infrastructure.
- Received an upgraded full-time offer in recognition of outstanding internship performance (May 2023).

Projects

A Unified Deep Learning Based Low-complex Android Ransomware Detection Engine

- Tools & technologies used: Android security, Hybrid Analysis, Deep Learning, ANOVA, Feature selection, Python
- Developed a deep learning-based Android ransomware detection model using Python, applying behavioural analysis, feature selection, model training, and performance evaluation.
- Applied hybrid static and dynamic analysis in sandbox environments and feature-selection techniques to identify high-value behavioural attributes while reducing model complexity and training overhead.
- Built and optimized an MLP classifier achieving 98.3% binary classification accuracy and 88.3% multiclass accuracy across 10 ransomware families.

Certifications

Bloomberg Finance Fundamentals *Sep. 2026*

Google Cybersecurity Professional Certificate *Sep. 2024*

Cloudflare Accredited Configuration Engineer (ACE) *June 2024*

Technical Skills and Interests

Programming Languages: Python, SQL, R, C++

Developer Tools: Git, GitHub, Bitbucket, Docker, Kubernetes, Terraform, CloudFormation, ServiceNow

Cloud/Databases: AWS, Cloudflare, RDS (MySQL), DynamoDB, Redis

Coursework: Machine Learning & AI, Deep Learning, Data Structures & Algorithms, DBMS, Machine Learning in Finance, Data Analysis with Python, Foundations of statistical modelling

Extra Curricular Activities

Web Development freelance *Sep. 2026*

TEDxNTU Volunteer – Logistics and Operations *Sep. 2026*
